

In the Claims

Make amendments to claims 20-22, 41 and 52 as shown below in clean form and as shown in marked form in the attached document entitled "Marked copy of March 26, 2002 amendments to the claims in USSN 09/590,924 (55416US002)":

Sub B3
A21
20. (amended) A birefringent dielectric multilayer film that reflects at least 50% of light in a band at least 100 nm wide in a wavelength region of interest, wherein the film is heat set at a temperature sufficient to enable the film to shrink at least about 0.4% in both in-plane directions upon heating.

21. (amended) The film of claim 20, wherein the wavelength region of interest is from about 700 nm to about 2000 nm.

22. (amended) The film of claim 20, wherein the film is heat set at a temperature sufficient to enable the film to shrink at least about 0.7% in at least one in-plane direction upon heating.

A22
Sub B3
41. (amended) A pre-laminate comprising a first layer of an energy absorbing material and a layer of a film, wherein the film layer comprises a birefringent dielectric multilayer film that reflects at least 50% of light in a band at least 100 nm wide in a wavelength region of interest, wherein the film is heat set at a temperature sufficient to render the film capable of shrinking to conform without substantial wrinkling to a substrate having a compound curvature.

A23
52. (amended) A vehicle comprising an optically clear laminate article comprising the following layers: a first non-planar layer of glass, a first layer of PVB, a film layer, a second layer of PVB and a second non-planar layer of glass, wherein the film layer comprises a birefringent dielectric multilayer film that reflects at least 50% of light in a band at least 100 nm wide positioned between wavelengths from about 700 nm to about 2000 nm, wherein the film is heat set at a temperature sufficient to render the film capable of shrinking to conform without substantial wrinkling to the non-planar glass layers.
